

23 October 2008

To whom it may concern

The Hellenic Club was first introduced to the CellarControl Technology in April 2008. Although we were skeptical at first, we were interested in the potential savings CellarControl had to offer while keeping our beer at top quality. We pride ourselves on exceptional beer quality and are determined to maintain our high standards.

In the months following installation, we monitored our beer quality and were pleased to see that there was no decrease in the quality of our beer and that our high standards had been maintained.

Since the installation of the CellarControl system we have been able to clean our beer lines every 6 weeks rather than every week, saving us on beer wastage, chemical usage and labour - while maintaining our high beer quality. Our savings have been greater than our monthly rental payments for the system and we are very pleased we installed CellarControl on our premises.

We have found the CellarControl system to be a worthwhile investment and have since recommended it to other clubs in Canberra.
